BRIGHT COFFEE SHOP

UNLOCKING REVENUE GROWTH THROUGH DEMAND OPTIMISATION AND PRODUCT UPTAKE

REVENUE PERFORMANCE INSIGHTS & RECOMMENDATIONS

REFILWE MOFOKENG
MARCH 2026

CONTENT

EXECUTIVE SUMMARY

Revenue growth is strong but constrained by demand concentration and suboptimal product utilisation, creating opportunities to drive targeted product uptake and expand demand across time periods

BALANCED STORE PERFORMANCE	STRONG REVENUE GROWTH	REVENUE CONCENTRATED IN TIME & PRODUCT CATEGORIES	UNDERUTILISATION OF EXTENSIVE PRODUCT PORTFOLIO	CLEAR OPPORTUNITY TO OPTIMISE DEMAND
All stores contribute equally (~33%), indicating consistent execution and suggesting that performance is driven by broader customer behaviour rather than location-specific factors.	Revenue has more than doubled from January to June across all stores, reflecting strong momentum, though likely influenced by seasonal demand patterns rather than structural changes.	Revenue is heavily concentrated in weekday mornings, indicating dependence on commuter traffic and underutilisation of afternoons, evenings, and weekends. Additionally, Coffee, tea, and bakery products dominate revenue (~78%), despite a wide and diverse product offering across multiple categories.	Despite having a broad range of products across categories (e.g., flavours, packaged goods, branded items), these contribute minimally to revenue. Customers consistently default to a small subset of familiar products, suggesting that choice complexity is limiting broader product adoption.	Revenue growth will come from **shifting customer behaviour** through increasing visibility and uptake of existing products and activating underutilised time periods.

REVENUE OVERVIEW

Balanced store performance with no clear outperformer, indicating systemic (not location-specific) growth drivers

TOTAL REVENUE
R698 812.23

ASTORIA	HELL'S KITCHEN	LOWER MANHATTAN
R232 243.91	R236 511.17	R230 057.25
33.23%	33.84%	32.92%

- All three locations contribute roughly one-third of total revenue . Hell's Kitchen slightly leads, but differences are not statistically significant
- Suggests strong **operational consistency** and limited differentiation across locations
- Growth opportunities should focus on **network-wide strategies**, not individual stores

REVENUE TRENDS OVER TIME

Revenue has doubled over six months, indicating strong growth momentum potentially driven by seasonality and is concentrated in weekday mornings, highlighting reliance on commuter-driven demand and underutilised off-peak periods

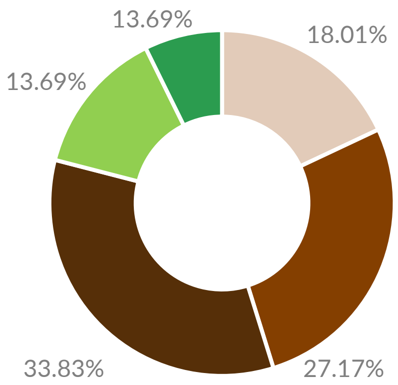
M-o-M Revenue Trend by Store Location

	Jan	Feb	Mar	Apr	May	Jun
Astoria	R27 313,66	R25 105,34	R32 835,43	R39 477,61	R52 428,76	R55 083,11
Hell's Kitchen	R27 820,65	R25 719,80	R33 110,57	R40 304,14	R52 598,93	R56 957,08
Lower Manhattan	R26 543,43	R25 320,05	R32 888,68	R39 159,33	R51 700,07	R54 445,69

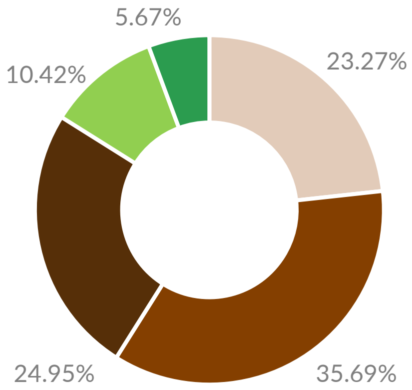
Revenue by Day of Week & Store

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Astoria	R32 795,1	R33 928,2	R31 816,7	R34 244,6	R34 140,3	R33 472,7	R31 845,9
Hell's Kitchen	R33 685,6	R33 389,5	R34 846,4	R33 779,0	R33 468,0	R34 743,1	R32 599,2
Lower Manhattan	R31 849,5	R34 359,4	R32 792,7	R32 289,8	R33 159,3	R33 157,0	R32 449,3

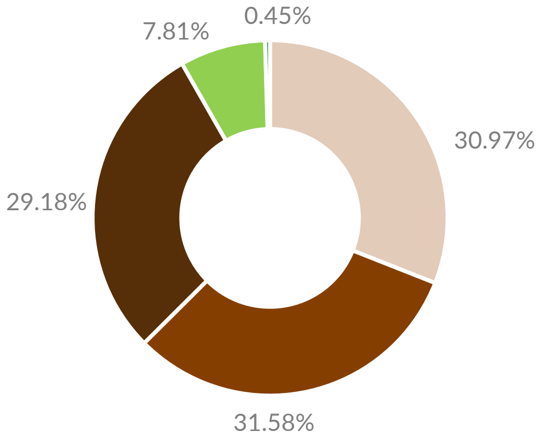
Astoria



Hell's Kitchen



Lower Manhattan



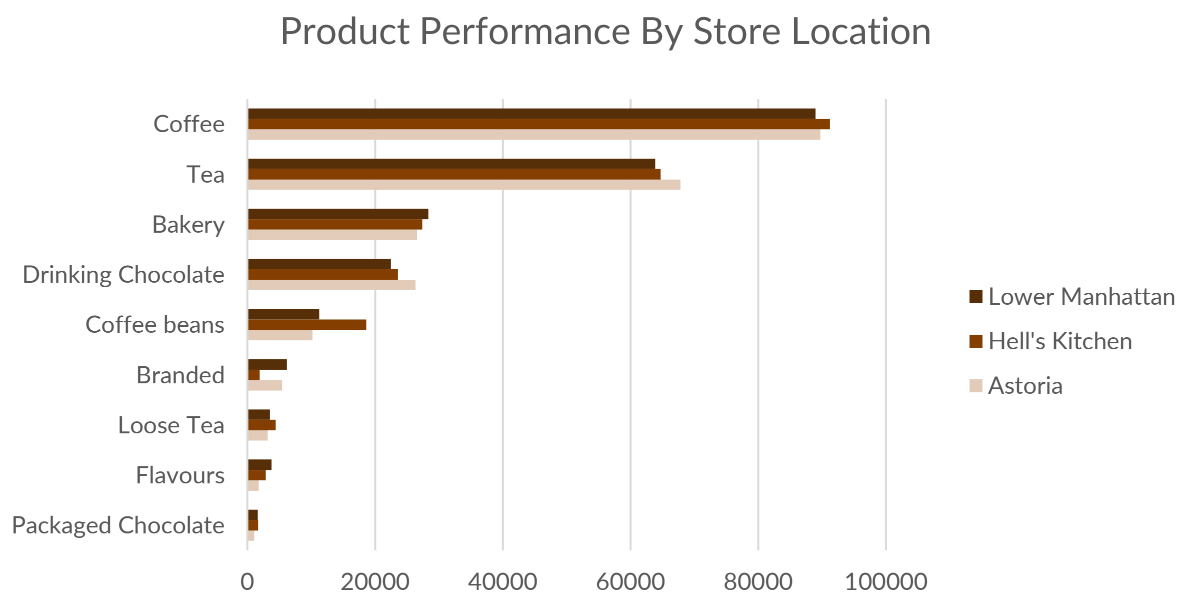
01. Morning Rush · 02. Mid-Morning · 03. Afternoon · 04. Evening · 05. Night

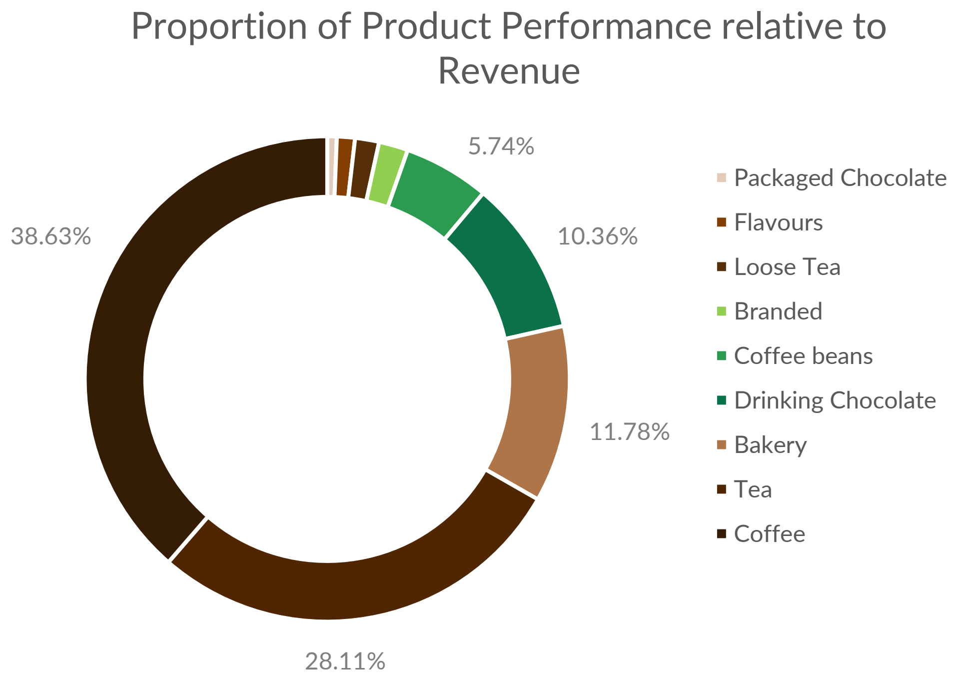
- Revenue has **more than doubled from January to June**
- Growth trend is **consistent across all store locations**
- No single store is outperforming → growth is **driven by broader demand patterns, not location-specific factors**
- **Weekdays outperform weekends** → demand driven by work/commuter behaviour
- **Morning periods dominate revenue contribution** across all stores contributing 45,19%, 58,96% and 62.55% in Astoria, Hell's Kitchen and Lower Manhattan, respectively
- Significant drop-off in **evening, and night periods**

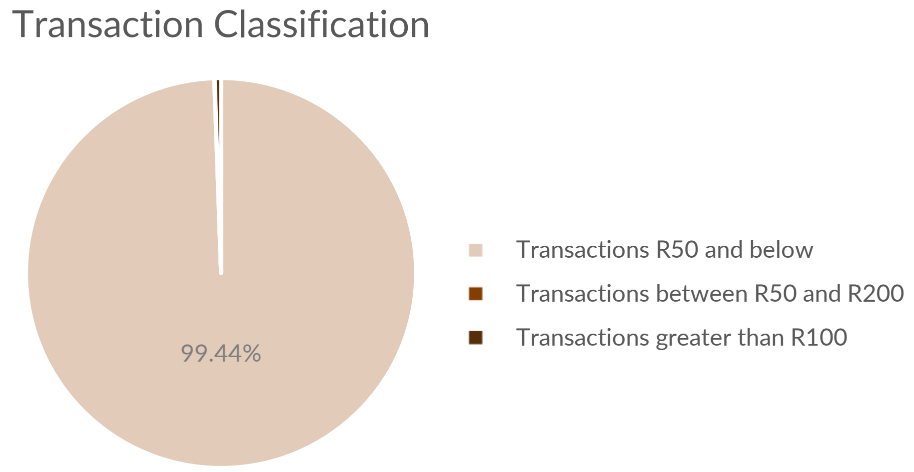
The business is experiencing strong growth, but it is highly dependent on weekday morning traffic and impacted by the underutilisation large portions of the day and weekends

CUSTOMER BEHAVIOUR & PRODUCT PERFORMANCE

Revenue is highly concentrated in core beverage and bakery products, with limited contribution from secondary categories







- Revenue generation trend by product category is similar across all stores, with marginal variation
- Highest performing products are **Coffee, Tea and Baked Goods** which contribute **~ 78.52% of total revenue**
- Underperforming products (Packaged Chocolates, Flavours, Loose Tea and Branded products) contribute **< 6% of total revenue**
- Majority of transactions are **low-value (≤ R50)**

Strong core offering → good foundation but untapped upsell and cross-sell potential

RECOMMENDATIONS

- Introduce Loyalty Programmes
- Optimise Product Mix
- Activate Off-Peak Demand
- Increase Average Transaction Value
- Drive Product Uptake

INTRODUCE LOYALTY PROGRAMMES TO DRIVE RETENTION & FREQUENCY

PROBLEM:

There is no structured mechanism to encourage repeat visits or build customer habits.

ACTIONS:

Launch a simple loyalty programme:

- "Buy 5, get 1 free"

Digitise tracking (app or QR-based system)

- Enable ability to order, earn and spend points on app
- Explore the use of gamification

Added benefit – additional data points to drive targeted and personalised campaigns

Reward desired behaviours:

- Extra points for off-peak purchases

Introduce tiered rewards:

- Bronze → Silver → Gold customers and have discounts tied to the tiers

IMPACT:

Increases visit frequency & builds long-term customer value

OPTIMISE PRODUCT MIX (GROW WEAK CATEGORIES, LEVERAGE STRONG ONES)

PROBLEM:

Revenue is highly concentrated in a few categories; long-tail products underperform

ACTIONS:

Increase visibility of underperforming products:

Placement near checkout or high traffic areas

In-store **awareness campaigns**

"Try something new today"

Introduce **pairing recommendations:**

Coffee → pastry / syrup upgrade *"Perfect with your coffee"* positioning

Use **menu cues and combos:**

"Most people add…"

Staff-led subtle recommendations

Use **limited-time features** to create urgency

IMPACT:

Diversifies revenue & increases contribution from existing products

ACTIVATE OFF-PEAK DEMAND

PROBLEM:

Revenue is heavily concentrated in weekday mornings

ACTIONS:

Introduce **time-based** offers/promotions:

- "Afternoon pick-me-up" / "2-for-1 after 2pm"

Launch **weekend-specific** offerings:

- Brunch menus, leisure-focused promotions

Expand **product selection** to align with **seasonality:**

- Introduce iced coffee and blended beverages (e.g., frappés, iced lattes)
- *Position as refreshing afternoon alternatives*

IMPACT:

Unlocks revenue from underutilised time periods

INCREASE AVERAGE TRANSACTION VALUE

PROBLEM:

Majority of transactions are below R50

ACTIONS:

Introduce **bundled offers**:

- Coffee + pastry combinations at a slight perceived discount

Implement price **anchoring strategies**:

- "Why not Upgrade to large for ***only*** +R5?"
- Highlight premium option first

Add point-of-sale **marketing prompts**:

- "Would you like to add a muffin?"

Design **menu structure** to encourage upgrades:

- Default medium/large sizes

IMPACT:

Uplift in revenue generate per customer

SIMPLIFY CUSTOMER CHOICE TO DRIVE PRODUCT UPTAKE

PROBLEM:

Too many options results in customers defaulting to familiar items

ACTIONS:

Use social proofing:

- Introduce curated sections **"Best Sellers" / "Recommended Picks"/ "Staff Picks"**
- Highlight visually:

"Top 5 drinks/ "Customer Favourites"

Use **visual cues at point of sale** and consider menu redesign (use visual hierarchy i.e. bolding, placement)

IMPACT:

Increases uptake of **underperforming and high-margin products**

THANK YOU
